

## Blackberry

---

Want Gmail on your BlackBerry? Try the [Gmail for mobile application](#).

**Note:** Gmail IMAP access is not officially supported for BlackBerry devices at this time.

To integrate Gmail with the BlackBerry's email client, just follow these steps:

1. On your BlackBerry device, navigate to your home screen
2. Select the icon that lets you set up email (this can be called **BlackBerry Set-up**, **E-mail settings**, or **Personal Email Set-up**)
3. Follow the setup instructions provided on your device

If setup is successful, you should receive a confirmation message and a new mailbox icon should appear on your device's home screen labelled with your email address.

## Google Email Uploader

---

The Google Email Uploader is an open source desktop utility for Microsoft Windows. It uploads email and contacts from desktop email programs (like Microsoft Outlook®) into your Google Apps mailbox. It preserves information such as sent dates and sender/recipient data, as well as the folder structure used by email programs.
